# X!Skip Software

For negative or flexo plates to reduce exposing time

Purpose

X!Skip reduces the exposure time by skipping over areas which do not need to be imaged. Typically, these are flexo ablation plates and negative reacting layers like etching resist or negative offset plates.

Main functions

All non-printing areas are skipped, as shown in the figure with „Skip".

Only the blue areas are imaged, there is a rapid advance in the gaps between these areas.

Main benefits

- – Reduction of exposure time
- – Reduction of operating costs
- – Same high quality and production reliability

BASED ON INNOVATION.
